[LinkedIn](#) | [Portfolio](#) | [GitHub](#)

A Computer Science undergraduate who believes technology should solve real human problems. Passionate about building scalable, maintainable, and reliable systems with a focus on clean architecture and long-term sustainability. Motivated to bring a result-driven mindset, strong collaboration, and practical problem-solving skills to deliver high-quality solutions.

EDUCATION

BINUS University

Jakarta, Indonesia

Bachelor of Computer Science, Specialization in Software Engineering – GPA: 3.80/4.00 (82 credits)

(2024 – 2028)

- Relevant Coursework: Algorithm and Programming (A-), Data Structure (A), Algorithm Design and Analysis (A-), Object Oriented Programming (A-), Artificial Intelligence (A), Database Technology (A), Software Architecture (A), Software Engineering (A), Code Reengineering (A)

Budi Agung Trilingual High School

Jakarta, Indonesia

High School Diploma of Mathematics and Natural Sciences

(2021 – 2024)

- Achieved 2nd highest score in writing a scientific paper with the title The Impact of Python Programming Language Scalability on Machine Learning Development.
- Achieved 2nd rank in the third year of high school.
- Achieved 4th rank in the second year of high school.

EXPERIENCES

S-Class Program BINUS @Kemanggisan

Jakarta, Indonesia

Sigma Lab Club – Product Development

(Feb 2026 – Present)

- Selected as 1 of 70 students from B2028 cohort for a product development track based on academic selection criteria.
- Completed weekly general and club training in product development fundamentals.
- Collaborated with cohort members in club-level training sessions to apply product development frameworks.

Keluarga Mahasiswa Buddhis Dhammavaddhana BINUS University

Jakarta, Indonesia

Secretary of Waisak Puja 2570 B.E./2026 X HUT KMBD XXXVII

(Jan 2026 – Aug 2026)

- Managed end-to-end administrative documentation for 35+ committee members across 5 divisions, including proposals, meeting minutes, MoAs, invitation letters, and venue/equipment permits, and accountability reports.
- Streamlined documentation workflow using Google Workspace and AI-assisted automation tools.
- Handled external communication for venue booking, equipment logistics, and vendor coordination.

Public Relations Coordinator of Waisak Puja 2569 B.E./2025 X HUT KMBD XXXVI

(Jan 2025 – Jul 2025)

- Led 6 committee members of Public Relations division for Waisak Puja 2569 B.E./2025, Vesak Rhythm Fest, and HUT KMBD XXXVI with 500+ participants.
- Managed internal and external communication with 13 media partners and 30+ external organizations.
- Handled participants outreach through 15+ social media content and promotional materials.

ISACA Student Group BINUS University

Jakarta, Indonesia

Project Manager of EXPO ISG 2026

(Jul 2026 – Sept 2026)

- Led 18 committee members across 2 divisions to organize booths.
- Managed end-to-end administrative and financial documentation, including proposals, meeting minutes, budgets reports, and accountability reports.
- Grew registrants by ~83% year-over-year by expanding organization outreach to BINUS @Bekasi.

BINUS University

Jakarta, Indonesia

Freshmen Partner B2029 BINUS @Kemanggisan

(Sep 2025 – Sep 2026)

- Mentored and monitored 8 freshmen in pairing groups throughout the one-year Excellence Program (EP).
- Conducted 13 weekly sessions over 2 semesters to introduce and discuss BINUS Graduate Attributes (BGA) to freshmen.
- Supported freshmen in adapting to the academic and social university environment.

Team Promotion and Events

(Jul 2025 – Dec 2025)

- Assisted lecturers during school visits for seminars and promotional activities.

- Facilitated orientation sessions and group discussions for 70+ freshmen.
- Guided and monitored 8 freshmen in pairing groups throughout the New Student Experience and Transition (NEXT) program.
- Introduced the Computer Science program curriculum, academic resources, and helpful tips and tricks to freshmen.

PROJECTS

HapHap – Surplus Food Marketplace (2026)

- Designed user flows, wireframes, and high-fidelity mobile-first UI.
- Developed a full-stack mobile application MVP using Flutter (frontend), NestJS (backend), PostgreSQL & Supabase (database), and Midtrans (payment gateway).
- Structured a reliable, maintainable, and scalable software architectures for semi-production ready deployment.

Klean – Laundry Marketplace (2026)

- Applied Scrum/Agile methodology and SDLC principles using AI-driven workflow to plan, design, develop, and iterate.
- Designed user flows, wireframes, and high-fidelity mobile-first UI as Progressive Web App (PWA) for cross-platform application.
- Developed a full-stack web application MVP using React & Vite (frontend), NestJS (backend), PostgreSQL & Supabase (database), and Midtrans (payment gateway).

Bersih.In – AI Waste Classifier (2025)

- Designed user flows, wireframes, and high-fidelity UI for single-page web application.
- Trained an EfficientNetB0 model on 45,000+ waste images with ~98% validation accuracy.
- Developed a full-stack single-page web application MVP using React (frontend), Express.js (backend), and Flask (inference).

Katasaka – AI-Integrated Folklore and Local Language Platform (2025)

- Designed user flows, wireframes, and high-fidelity mobile-first UI.
- Conducted market validation through a survey with 50+ respondents with ~75% confirming the problem.
- Selected as Top 50 Semifinalist at DigiHack 2025 national hackathon competition held by Universitas Telkom.

Arunika – Learning Management System (2025)

- Designed user flows, wireframes, and high-fidelity mobile-first UI.
- Selected as Top 10 Finalist at PINGFEST 2025 national UI/UX competition held by Universitas Sebelas Maret.

RESEARCH

Comparative Study of Transformer Models for Indonesian Multi-Label Hate Speech and Abusive Language Detection (2026)

- Fine-tuned and benchmarked four transformer models (IndoBERT, IndoBERTweet, mBERT, XLM-RoBERTa) on 13,000+ Indonesian tweets for multi-label hate speech classification.
- Evaluated the impact of text preprocessing across architectures and identified IndoBERT as the strongest-performing model overall.
- Accepted and presented at EECSI 2026 conference held by Universitas Ahmad Dahlan.

A Dual Explainability Framework for Cardiovascular Disease Prediction Using SHAP and LIME with Tree-Based Machine Learning Models (2026)

- Developed and optimized tree-based ensemble models (Random Forest, XGBoost, LightGBM) on clinical data.
- Applied SHAP and LIME to provide global and patient-level explanations.
- Accepted and presented at ICISS 2026 conference held by Institut Teknologi Bandung.

OTHERS

Languages: English (Professional), Chinese (Elementary), Indonesian (Native)

Programming Languages: TypeScript, JavaScript, Python, Java, Dart, C

Frameworks & Libraries: React, Tailwind, Axios, Express.js, NestJS, Prisma, Flutter

Databases & Infrastructure: MySQL, PostgreSQL, Supabase, Vercel, Railway

Tools & Methodology: Agile/Scrum, Visual Studio Code, Git, GitHub, Postman, Figma
